METER POINT REQUEST TOOL UPDATE FOR MHHS

CHANGE ISSUES GROUP - 03 JULY 2025

NEW METERING POINT REQUEST – UPDATE TOOL

- ‘REC Consequential Change – Additional Metering Points’ confirmed updates required for M10 to the Secure Data Exchange Service (SDES) New Metering Point Request tool as follows:
  - Remove the following data items
    - Expected Profile Class
    - Expected Measurement Class
  - Add the following data items as mandatory
    - Expected Connection Type
    - Expected Market Segment
- During testing of the changes to the MPAN Request process Supplier questions, **it has been noted that the ‘Type of Premises’ question currently aligns to the 'MPAN Designation' and includes a 'Commercial' enumeration**
- As the **MPAN designation is being removed and replaced with the Domestic Premise Indicator for MHHS**, the 'Commercial' enumeration is no longer applicable

Solution = remove 'Commercial' from the drop down leaving ‘Unknown’, ‘Domestic’ and ‘Non-Domestic’.

NEW METERING POINT REQUEST UPDATE – IMPACT & APPROACH

RETAIL ENERGY CODE

Impact = limited

- For DNO info only. DPI will be set by Supplier on registration as normal
- No impact on EES solution going through testing, New Metering Point Request tool is a standalone module in SDES

Approach:

- Direct Change Request (CR) from RECCo to EES Provider - covered in the MHHS cutover CR, currently under IA
- Implemented alongside previously agreed updates to the tool

Ask of Change Issues Group:

- SDES requirements for this request are not codified in the REC, no code change required
- REC Parties to take the opportunity to review and comment on intended approach for progression directly with the SDES Provider
