1 CHANGE OVERVIEW

The current requirement under the BSC and the REC is that the Metering Equipment Manager (MEM) appointed by the Export Supplier must be the same MEM appointed by the Import Supplier. When Consumers switch to a new Import Supplier, the Export Supplier may become non-compliant with industry regulations if they are unable to appoint the same MEM as the incumbent Import Supplier.

2 CHANGE PLAN UPDATE

The lead code on R0144 is the BSC (under BSC Modification P459) as they are the most impacted by the change. The REC will need to align to the BSC timetable once that is available, but currently there is no timetable in place for the BSC modification. Only the first BSC workgroup has been held so far on 23 February 2024, and there are no dates planned for further meetings yet.

The Code Manager is proposing the withdrawal of this Change Proposal Plan and the submission of a new one once a timetable is available from the BSC, rather than submitting an extension when the dates are so unknown.
